Alexander

Kitchen utensils & gadgets

Since 1977, we have compassed the needs for high quality kitchen tools, uninterrupted operation and excellent aesthetics, but always with a particular emphasis on serving each of our partners, as a unique entity

Alexander Handcrafted Mills, was established in the catering industry in 1977, making handcrafted spice and coffee mills.

Its products are characterized by high quality and professional functionality. They have been loved by both professionals and home users worldwide, due to its exports since 1981.

The needs of cooks around the world, both professional and non-professional, have prompted Alexander to develop other quality kitchen utensils.

With the right equipment and always a quality driver, after much effort to achieve excellent results, Alexander is expanding its product range by manufacturing stainless steel tongs for all professionals and amateur chefs, who love quality.

For 2020, Alexander presents the ATLAS series of stainless steel AISI-430 tongs. The alloy used is 100% food-safe and more resistant to high temperatures than other stainless-steel alloys.

Over the years, Alexander has associated its name with excellent manufacturing and functionality of products, that appeal to both professionals and home users, who are fond of quality in their cooking.

Guided by all these and the market demands, we continue to create and treat each of our associates as one and only, in order to satisfy all of their needs.

ATLAS tongs

Pine Cone series tongs.
 Ideal for BBQ because it hooks the meat.
 Due to its length it does not allow the hand to approach the fire.
 Suitable for both professional and home use. It has a spring and not a simple laminate at its closure.
Made of stainless steel AISI-430, which is suitable for food and high resistance to high temperatures.
Non-stick
